One connected view of mission-driven capital.

U.S. philanthropy, federal funding, and global development funding live in systems that don't connect. SciRise resolves them into the CapitalGraph: across U.S. sources, **1.6M resolved organizations**, **14M grants, awards, and contracts**, and **$370B** in matched funding on a 2024 basis, plus a global aid layer, so you can see who funds what, through whom, across a mission.

Illustrative SciRise CapitalGraph: North Carolina shown; coverage is global.

WHAT THE GRAPH ANSWERS

From connected records to practical answers.

Funder prediction
Rank the funders most likely to begin funding an organization, validated against later funding outcomes.

Peer benchmarking
Find peers by funding behavior and financial structure, not category codes alone; benchmark revenue mix, funders, and compensation.

Intermediary flows
Follow disclosed flows through DAF sponsors, fiscal sponsors, and regranters: funders in, recipients out, attribution gaps flagged.

Landscape mapping
See a mission area end to end: funders, nonprofits, who funds whom, where capital concentrates and where it runs thin.

THE PROBLEM WITH RAW FILINGS

Ingesting filings is easy. Understanding them is the work.

Raw-filing products primarily surface filings as reported.

CAPABILITY	RAW FILINGS ALONE	SCIRISE
Surfaces source filings and documents	✓	✓
Resolves free-text recipient names to verified organizations	–	✓
Identifies disclosed intermediaries: DAFs, fiscal sponsors, regranters	–	✓
Connects foundation, federal, financial, and leadership data	–	✓
Multi-year patterns rather than single-year snapshots	Limited / manual	✓
Predictive recommendations validated on holdout-year outcomes	–	✓

PREDICTION, NOT JUST DESCRIPTION

A practical test of the connected data is whether it improves prediction. In validation, among nonprofits that added a new funder, SciRise placed at least one eventual new funder in its top 10 for **39% of those nonprofits, about 10 times** the top-10 hit rate of matching on funders' published mission statements.

Validation: trained on multi-year IRS 990/990-PF filings, tested on a later holdout year never seen in training, and replicated across multiple test windows. Population: nonprofits with three or more existing funders that added a new one. Repeat grants excluded: the model must predict funders new to the organization. Funders SciRise does not list, such as pure donor-advised fund sponsors, are not counted. Baseline: AI matching of each nonprofit's mission to funders' published mission statements, scored on the same data.

HOW RAW FILINGS BECOME THE CAPITALGRAPH

Every record earns its place.

01
Ingest
IRS 990 and 990-PF filings, federal award and contract records, global development funding records, and audit and disclosure data: the core public record of mission-driven funding.

02
Resolve
Many raw records identify recipients through inconsistent names and identifiers. SciRise matches them to verified organizations with multi-stage entity resolution.

03
Filter
Donor-advised funds, fiscal sponsors, and regranters can obscure the original funder or final recipient and create double-counting risk. SciRise separates their disclosed flows from direct-funder analytics and flags attribution gaps.

04
Validate
Predictive outputs are tested against later funding outcomes using a holdout year never seen in training.

COVERAGE

The public record of mission-driven capital, connected.

SciRise is built from core authoritative public sources: IRS 990 and 990-PF filings, federal award and contract records, global development funding records, and audit, disclosure, and related-organization data. Every stream resolves to the same organizations, so foundation giving, federal funding, global development funding, financials, and leadership connect.

9.8M
Foundation grant records from IRS filings, including available tax-year 2025 records

4.6M
Federal awards and contracts from USAspending through June 2026

1.6M
Resolved organizations: nonprofits, foundations, and universities

19,000+
Grantmaking foundations with extracted grant detail

2.3M
Distinct U.S. funder-to-recipient relationships resolved

2.2M
Nonprofit annual filings with full financials and revenue lines

5.7M
Publicly disclosed officer, director, and organization contact records

$370B
Matched foundation grants and federal awards and contracts, 2024 basis

GLOBAL DATA

Through IATI, the reporting standard used by UN agencies, bilateral donors, and major INGOs, the graph adds 622,000 aid activities, 10M transactions, and 2.1M resolved international funding relationships: roughly $150B per year in reported disbursements (2022-2024), counted only from originating government and foundation funders to avoid double counting pass-through flows. IATI totals partially overlap with U.S. federal and foundation records and are not additive to the $370B figure.

Coverage current as of August 2026; recent-year totals reflect records available as of that date. The $370B combines each foundation's most recent filing with federal fiscal year 2024 awards and contracts. Holdings include foundation filings since 2016, federal awards and contracts since 2018, and global development funding records since 2000. Matched history and cumulative U.S. funding figures cover 2020 onward, as of August 2026.

CURRENT, TRACEABLE, AUDITABLE

Data you can put in front of a board.

Continuously updated
New filings and federal records load as they become available, with the latest available filing for each covered funder. Matched grant history spans the six tax years since IRS e-filing became mandatory, with recent years still filling in.

Source-linked
Every underlying source record traces to the original filing, award or contract record, global development funding record, audit, or disclosed relationship. Benchmarks and rankings are derived from that evidence.

More than $1.5T mapped
Across U.S. records from 2020 onward, available as of August 2026, the graph matches more than $1.5 trillion in cumulative value of foundation grants, federal awards, and contracts to identified nonprofits and universities, including grants made through DAF sponsors and regranters.

Start from the evidence base already built.

SciRise puts this data to work in funding strategies, landscape analyses, funder maps, peer benchmarks, and diligence. Outputs are built to stand up in front of a board or an investment committee.
